Gender Equality Plan
Document version history

Version 1 – January 2022

This “Gender Equality Plan” bundles all actions imec will take in 2022, and reports about the actions that were taken in 2021. Our ambitions are set in a broader time horizon (of 2025 and 2030).

Imec intends to update the GEP every year, with the most recent numbers and results of the actions taken, and with the actions that are being planned in the year to come. In this way, additional actions are geared to the results that we already achieved, but also consider the setbacks that we had.

Version 2 – April 2022

Imec’s Executive Board has validated the Balanced Scorecard and KPI’s for 2022, including the Gender Equality Plan, during the Board meetings of January 24, February 2 and April 21 2022.

The plan has been disseminated to everyone of imec during the “Quarterly Update” meeting of February 10, 2022. The Quarterly Update meeting is an initiative to keep everybody up to date of imec’s strategy and to give an insight in some of the highlights of the last quarter. It is streamed.
Imec has defined Diversity & Inclusion as one of three key corporate priorities in 2020. Not because this is fashionable. Because you, the people of imec, told us to do so. You gave this feedback via our engagement and wellbeing survey, via many other conversations we have on a regular basis, via exit interviews. That was an important trigger to put this on the agenda.

It came a bit as a surprise. Imec according to me has been an impressively diverse, open, and inclusive workplace from its start. But in recent years I must admit I see two major changes. Around us, the bar has been raised making us from a front runner into a member of the pack. Also, we have reached a point where “ordinary” actions can no longer take us beyond. With a risk of stagnation, especially with respect to gender equality. The Gender Equality plan presented here, is part of our endeavor to break this status quo and do better for the decade to come.

It does feel somewhat outdated. Young people entering imec today think and speak very differently. Being the entire you, without any labels. To make room for these next-generation questions, we must do better in today’s sticky issues. Gender equality should be a given.

This plan presents many visible, tangible, and impactful actions and progress made in the past two years towards gender equality, which are seamlessly linked to the actions we aim to take in the years to come: We start from ambitions, fully endorsed by our Executive Board:

- We want to have 25% women in R&D and 25% women in leadership by 2025 and go up to 30% by 2030.
- We want everyone to feel part of imec, feel belonging and feel included, and we want to measure this sense of inclusion in our newest engagement and wellbeing survey. We don’t want to see any significant differences between whatever segments we can think of—women versus men to start with.

Paper in its own, even when called imec’s Gender Equality Plan, will never make a difference. A shared responsibility about which imec communicates very explicitly and invitingly, will. If we feel this is “our” ambition, then we are ready to take a big step forward.

Managers, please dig into this plan and our policies. Make them your own, live them. And yes, there is a lot we cannot change. For instance, we can’t make 50% of students in STEM women. But there is a lot we can control. We can make sure that the 30% women that come to imec, stay at imec, that they don’t leave for the wrong reasons. We can make sure that strong women grow within imec. And we need to challenge any biases in our thinking, to be able to do so.

imec colleagues, yes, you can contribute too. Speak your mind about how you feel—do you feel included, do you feel you can be yourself; you can be “you”, at imec? And don’t look the other way, don’t tolerate sexist behavior. Invite each other to think and speak again.

HR will support you as much as possible. For instance, it’s hard to measure progress without data. A dashboard so that teams and managers have their own data, and can easily monitor their progress, is an important action of the Gender Equality Plan.

These actions, and many more, are reflected in the plan

Let’s make sure that we mean it, when we say we are an inclusive Gender Equal workplace!

Lisbeth Decneut
Executive Vice President - CHRO imec
Acting on behalf of the imec Executive Board
Where are we now?

1. Diversity – from a gender perspective

Over the last decade, imec has grown to approximately 2.5 times its size. This has implied an ever-growing effort from our talent acquisition team, with almost 300 new hires every year to provide in replacement and to enable further staff growth. The total employment has grown to 5000 members, of which almost half are payroll, and the other half are non-payroll. Non-payroll mainly concerns guest researchers and industrial residents within the framework of programs, but also PhD students and interim or flex forces.

The past ten years, we have observed a steady growth in international representation, at all levels of the organization. But at the same time, our women representation in the payroll population stabilizes at 27%. This persistent unchanging number stems mostly from our core business, R&D, as women representation among non-R&D (supporting units) is close to the population mean.

![Charts showing representation of women in various roles at imec](chart1.png)

Luckily, there is some movement within. imec can present a representation of women in its Executive Board equal to the overall imec mean. However, the pipeline towards these highest levels within our organization, has not substantially improved in terms of representation of women. This is the case for employees in a formal managerial role and/or with people reporting to them (direct reports). It even applies to higher levels, regardless of role, whether people or technical oriented.

![Charts showing representation of women in different managerial roles at imec](chart2.png)

---

1 Numbers on female representation are payroll imec Belgium & The Netherlands only, situation December 2021. See attachment for imec BE and NL separately.
2. Inclusion – from a gender perspective

Imec’s bi-yearly connected minds engagement and wellbeing survey includes questions about equal opportunities and unwanted behavior. The last edition launched in March 2020 offers us interesting insights into how inclusive we are, according to the survey population: payroll, and payroll equivalent (PhD, postdoc and certain flexforces).

The survey asks whether everyone is treated equally and with respect, regardless of background or personal characteristics, in the immediate work environment within imec. The overall agreement of 7.9 (out of 10) is quite good, but interestingly, women rated this question only 7.5 out of 10 whereas men rated it 8.1 out of 10. To be very precise: middle-aged men with Belgian nationality are most convinced that imec offers equal opportunities. Especially women, but also employees of older age or employees with an Asian nationality, are much less convinced. This means we need to improve.

The survey also asks whether undesirable behavior was experienced in the past year, such as sexual harassment, bullying, discrimination, racism, aggression, or violence. 8% of imec employees experienced harassment of which 7% occasionally and 1.1% regularly. In open comments, the unwanted behavior was most often linked with either the gender or the intercultural dimension.

Whenever an employee leaves imec, they are asked to fill out a short exit questionnaire and have an exit interview with their HR BP. For exits in 2020 and 2021 combined, these data reveal 1.5 times more women than men consider imec to be “(not) inclusive”.

---

![Graph showing gender differences in perceptions of inclusion](chart.png)
Why change?

Why do we put gender equality [high] on the agenda? In other words, do we have a problem?
And how do we define this problem?

To start with, we can do better, but we don’t. imec wants to set a positive example to other companies and society at large. Europe has put specific requirements for next waves of funding. Our partners ask efforts from our side as well, they put it high on the agenda for collaboration or funding, where it should be. If we strive for excellence in everything we do, we need to be the best when it comes to treating everyone equally and being inclusive in every possible way as well.

To continue, research provides interesting indications that diversity unlocks innovation and drives business – a finding that should intensify efforts to ensure that the leadership ranks both embody and embrace the power of differences. There is a strong business case for it. It is a competitive advantage – engagement, attracting talent, better decision making, understanding market evolution – all key for innovation. If innovation is our nature, then diversity and inclusion should be our choice.

Note that diversity to imec is about much more than gender - which is nonetheless the focus of this plan. It starts with representation of women, especially in R&D and among the higher levels of our organization. But it doesn’t end there. From representation to truly being inclusive and treating everyone equally to increasing the feeling of belonging and support, is a long way to go. Unconscious bias is still present at imec. Imec puts a gender diversity ambition forward in this Gender Equality Plan, but imec also adds a gender inclusion ambition.
Our vision statement for an “Inclusive Workplace” will lead the way:

The mission, vision, and values of imec are built on the foundations of respect and diversity.

We actively embrace diversity of all kinds; it fuels our creativity and disruptive innovation.

We want to make a positive difference in our workplace and in the world by ensuring equality between all staff, including everything which makes you unique.

We are committed to be an inclusive workplace, that creates a sense of belonging for everyone, a place where everyone can be the best version of themselves.
Our Gender Equality ambition

Imec’s Executive Board fully endorses and supports the following gender equality ambitions:

25% by 2025
30% by 2030

% of women in R&D
% of women in leadership

8 / 10
women = men

Excellent and Equal score on Inclusion and Equal Treatment, for men and women, by 2025

With respect to diversity, we aim to mirror (replicate) our overall population mean:

- Across all organizational units. This means we need to improve representation of women in our R&D departments.
- Across all levels of our organization, including the highest levels. This mainly means that we need to improve representation of women starting from our level 7 roles (technical or people leaders), and up.

With respect to inclusion, we aim for a high overall score – 8 out of 10.

- But most importantly, we want women to score inclusion and equal treatment the same as men do.
- Inclusion is measured bi-annually. The first measurement opportunities are in 2022, 2024 ad 2026.

These ambitions become part of imec’s Balanced Scorecard as lever for their implementation. This way,

- Our Gender Equality ambitions will be taken as serious as safety or privacy or any of the other goals in the BSC.
- Our Gender Equality ambitions will be reported and followed-up on a structured and systematic basis.

To this last end, one important action we take, is to build and provide a management dashboard, showing our workforce broken down by diversity characteristics including sex, and our inflow, promotions and exits broken down by these characteristics as well. This will inform whether the actions in this plan are producing the desired results:

- Do we see our overall representation of women improving, across all organizations and levels of imec?
- Underlying, are we improving representation of women in our inflow and promotions? And are we preventing the avoidable loss of talented women for imec (exits)?
- Use this data and insights to discover what is actionable for us as an organization (corporate as well as locally) which buttons should we push (more) to achieve our goals?

2 Inspired by the Pledge 25x25 for Silicon Valley – Bay Area Companies
Our team

Two co-sponsors lead by example with respect to Diversity & Inclusion at imec. They share a vision, a “dream”.

- They occasionally meet and steer the project team, tuning the overarching storyline, the level of ambition, the desired results, the priorities.
- They act as a speaker on the topic, both internally as well as externally. Recent examples include introduction to the panel discussion on inclusive leadership, introduction to the Hack your Bias talk, interview during the Quarterly Update meeting, all events for imec employees.
- But most importantly: they embody diversity and inclusion. Both Lisbeth and Michael attach the highest value to the fact that diversity and inclusion should not be addressed only by the “token” representative, nor only by HR. It is in other words important the sponsors are a woman and a man, part of HR and of imec’s business.

The D&I project team consists of about 15 members divided over 5 task forces on diversity & inclusion, all (but 1) invested in gender equality as well. Again, this project team includes diverse members from HR and from the business. The core members are pictured above to illustrate this point.

Imec commits at least 1.5 FTE to diversity & inclusion in general [see recent sustainability report for more information], and gender equality more specifically.

Finally, a vibrant D&I Yammer community of no less than 168 members is installed in imec Teams. Members use this channel to share ideas, thoughts, interesting stuff to read – view – listen, to testify, ... And to participate in community activities like panel discussions or virtual talks.
Even though this grassroots approach is part of the appeal, the success, and the charm of the program so far, to truly move into the right direction it is important to give the topic corporate leverage. Hence, our ambition added to this plan, and the resources we commit to make it happen. This includes the two sponsors, the 1.5 FTE project members on a continuous basis, but also budgets provided every year in both HR and communication for campaigns, external consultancy, training, expert speakers, or participants to panel discussions, etc.

Gender equality in recruitment and career progression

To change our overall representation of women in the workforce, especially in R&D and in leadership teams, we need to act at the very start: when recruiting and hiring employees. Enough attention moreover should be spent in improving career opportunities and supporting career progression for women.

1. Looking back

Imec’s Inclusive Workplace policy, launched in 2021, inspired an update of all recruitment and hiring communication:

- The diversity and inclusion vision is added to imec’s career page and part of the standard template for vacancies
- The accompanying tagline (Innovation is our nature, inclusion our choice) is added to the signature of all recruiters

In 2021, for the very first time imec has organized a virtual “Top women in tech” jobinar, on International Women’s Day. It was an informative, live Q&A session aimed at talented and ambitious women in R&D (invited by imec employees or headhunted) and hosted by three women currently working with imec. Questions ranged from career paths for researchers, experience of being a woman in a scientific environment at imec, Diversity & Inclusion at imec, company culture, work-life balance and remote working, training, and mentorship,...

The event was a great success:

- 746 unique visitors to the specific Top Women in Techimec jobinar site
- 93 registrations for online jobinar, 34 live attendees online jobinar and others in replay
- 77 resumes sent in, of which:
  - 48 generic applications for imec as an interesting employer
  - 29 concrete unique applications for a specific job
  - (37.6%) of received resumes (77) were for a concrete open vacancy
    - 15 applications stopped after CV screening by hiring manager
    - 7 applications stopped after interviews
    - 2 applications stopped as Silver Medalist (=second best candidate)
    - 2 job offers refused
    - 3 hires

2. Looking forward

2.1. Improve imec’s employer brand and recruitment and hiring communication

From our actions in terms of inclusive recruitment and hiring communication in 2021, we learned that we should think big here, go beyond “our” best effort moving forward. Currently we are looking for an external partner to analyze and structurally improve our employer brand and recruitment and hiring communication.

How do female professionals look at imec, do they consider us an irresistible employer? Our narrative and visuals are important. We need to be much more conscious about how we are putting ourselves “out there”. What do women consider to be decisive? Which package will make the difference for them? And (how) can we offer this? Authenticity is key, combined with a sustained commitment to diversity and inclusiveness in all of our communication (basic e.g. adds, extra e.g. social media). The bar in terms of quality should be raised.

Are our job ads as attractive to women as they are to men, in pictures, wording, tone, ...? A first analysis performed internally, for instance has revealed the use of words that could deter women (like “challenge”, “ambitious”, “competitive”, “independent”, “drive”) when other words that could attract women are omitted (“committed”, “inclusive”, “collaborative”, “take care”). Consistency is key to achieving this. It should for instance not be left to coincidence, or to a specific hiring manager or recruiter, whether we take special care in how we word our job ads. We want to work with mandatory parts in our job ads, like our values, or use “gender decoders” to detect and correct subtle gender bias in wording, make sure we detail our benefits including our family-friendly benefits in every job ad, etc.

2.2. Build and actively manage talent pools for female STEM profiles

The first jobinar specifically targeting women was a success. Therefore, in 2022 and onwards, we want to organize more recruitment events targeting female STEM professionals. However, from our first event we learned that we should have a
system and process in place to actively manage high quality resumes that don’t fit a specific job opening at first or that are sent in “generically”. Today, those candidates all too often get lost. We want to build and actively manage talent pools for female STEM profiles in view of other or future positions within imec, by:

- Upskilling our recruiters in terms of technical knowledge, to better value and (re)direct resumes to other teams or future positions within imec
- Building (diverse), fixed hiring committees for certain technology or expertise domains within imec, able to better value and (re)direct resumes, and even to proactively create the right opportunities for strong female applicants

2.3. Implement guidelines to remove gender bias in processes for hiring and promotion

As imec has grown, and our volumes in terms of hiring have grown to approximately 300 hires each year, we need a better **birds-eye view of all steps of our hiring process**. A first analysis will collect data of job applicants on a sample of vacancies at each stage of the hiring cycle. Based on this first analysis, and in collaboration with our privacy office, we determine which extra registrations we ask of candidates when applying. This data will be used to monitor the complete process on a regular basis. If we establish that female representation changes (drops off) during the process, and identify at what stage, we can feed this information into guidelines for hiring managers and for the talent acquisition team.

The same action is taken in the promotion process. In 2021, we have replaced our Performance Management with a new **Performance and Talent enablement, including “Talent Reviews”**, twice per year. Managers analyze their team members, when it comes to impact, potential and risks (e.g. of leaving). They consider professional directions and possible actions that support this direction. During a so-called Talent Review, the outcome of the analysis is discussed with peer managers, to challenge, complement and coach each other in terms of possible directions and actions. Afterwards, feedback is given, and actions (including job rotation or promotion) are implemented.

Because we have introduced this new process; and tools to support it, we are developing a good view of the path that eventually leads to promotion. In 2022, we construct a **dashboard** combining this data with background information, including gender. This will help to analyze, review by review, whether female representation is stable across all review categories, including the high potentials, and whether women are equally identified for job rotations or promotion. Again, we can feed this information into guidelines for people managers and management teams.

**Gender balance in leadership and decision-making**

The gender equality diversity ambition, integrated into the balanced scorecard, aims to improve representation of women among leadership in imec. The monitoring and improvement of imec’s recruitment and promotion processes, removing any gender bias, aims to improve representation of women among leadership in imec as well.

These two actions combined are our main levers for improving the gender balance in leadership and decision-making in imec.
Work-life balance and organizational culture

1. Looking back: connected.minds

Imec’s bi-yearly connected.minds engagement and wellbeing survey again serves as our main source of data and insights, and instrument to drive change. It includes questions on work-life balance and organizational culture. In general, the work-life balance is scoring moderate, for men and women equally.

- From 6.6 out of 10 in March 2020, it dropped to 5.8 during the second Covid lockdown in November 2020, to improve again to 6.5 in October 2021.
- Gender is a crossing in this survey. Remarkably: there is no significant difference between the work-life balance of men or women working with imec. Women tend to rate their balance a little better, but not significantly so. There is also no difference in the ability to mentally disconnect from work at the end of the day. Women and men score the same here as well.
- Role is a crossing in this survey too. Here we see managerial roles overall tend to report a poorer work-life balance than team members, especially higher roles like directors or fellows. Team leaders stood out negatively but only at the height of the Covid crisis, during the second lockdown.

All in all, this points to an important area of concern: if we want women to advance more in imec, we need to improve the work-life balance in general, and in our leadership roles more specifically.

2. Looking forward

2.1. Implement (international) Future of Work

The Future of Work is now. HR invested in building a brand-new framework for hybrid working now and in the (near) future. As part of this framework, a home office support web shop is launched. Everyone who regularly works from home receives a personal voucher to order ergonomic equipment for their home office. 58% of those eligible, did so. The framework offers enough guidelines to bring clarity but enough room for team agreements within those guidelines as well. Results of the follow-up survey conducted beginning of October 2021 inform teams about their top priorities for team agreements. And one of the top listed results across imec, is: focus on work-life balance when designing and implementing a sustainable hybrid way of working for imec.

In 2022, we aim to follow-up the implementation of this framework, to see: what work from home arrangements are made in the different teams, and are these in line with general policy and with the line of work teams are in? To avoid too little work on site or too little work from home as well, as we know this will impact work-life balance negatively.

In 2022, we also aim to widen the framework with respect to “international” hybrid working. Goal is to investigate if and how we can allow for more working for imec “from abroad”. Applicants ask us to work for imec from their home country. For female applicants, this might even be more important as it is still more common for families to follow a male professional abroad, than it is for families to follow a female professional abroad.

Finally, our “total rewards” are rebranded. Imec has different appealing features in its rewards package, with quite some flexibility and choice for the employee – of which hybrid work is only one, and family benefits as well. All of these underline our efforts to offer a good work-life balance to our employees. In 2022, this package will be communicated more clearly to people aspiring to join imec but also to imec employees. A short, fun, explanatory video is the first step in this branding and communication effort.
2.2. Embed value-based perspective

The launch and promotion of a values campaign and value-based leadership framework has gained traction via various platforms (e.g. Quarterly update, Connect & Learn sessions, testimonials from people of imec), with [E]VPs bringing the story and leading the way.

This values campaign however will be intensified in 2022. Culture is integrative, therefore somewhat elusive. It is about the individual employee, the manager, the teams, the organization. Culture happens everywhere. From each angle, culture should be reinforced as one consistent narrative. Top-down only will not work, prioritizing will be difficult. Our view on everything we do, should be colored by our values. In 2022, we start by growing value-based leadership with a separate training module for first-time manager and with an integration of values in all our leadership trainings. An organization with strong values that speak to women typically will have an easier time recruiting and retaining women, which is why we think our campaign and actions on values are well situated in this Gender Equality plan.

Imec’s values

CEO Luc van den Hove in imec values campaign
2.3. Introduce "Inclusion" in connected.minds survey

March 2022, the latest connected.minds survey is launched. It will include a new outcome variable: “Inclusion”, standing next to engagement and vitality stemming from the first survey in 2020. Three questions are part of this variable:

- I can be myself around everyone I work with
- I am accepted the way I am within my immediate work environment
- Within my immediate work environment, everyone is treated equally and with respect (regardless of their background or personal characteristics)

A report with the resulting scores for these three questions separately and a score combined into “Inclusion” will be available at every level of the organization (imec, groups, units, departments, teams), and for men and women of imec separately.

Every team has access to their own report and will be able to assess the level of inclusion and act if necessary, supported by the HR Business Partner. Imec will review the corporate report and act if necessary, too. The scores are part of our Gender Equality ambition, in our Balanced Scorecard.

A complementary action is the retrospect of “Inclusion” as part of our exit interviews, together with the HR Business Partners conducting those interviews.

Hack your gender bias! training

1. Looking back

After a few successful pilots in 2020, the Hack your bias talk, training and e-learning was launched in 2021. Hack your bias! starts from the observation that everyone is biased in some way or another: if you have a brain, you are biased.

And while biases aren’t necessarily bad, they can negatively influence decisions and actions, while they are mostly unconscious. Basic building blocks include:

- Understanding of bias-related concepts: create mutual awareness of the presence and impact of bias
- Becoming aware of your own bias(es) and how they can influence others: starting with common biases like affinity bias, groupthink, and confirmation bias
- Actionable insights on how to deal with those biases in actual situations, such as team and project meetings, projects or assignments, collaborations between team members and managers, ...

Imec is convinced that “Hacking your bias!” will improve decision-making and collaboration and will create more inclusive teams valuing every talent. The e-learnings can be completed online whenever it is most convenient. They need to be completed prior to the training too; which is 1 full day in total, followed by half a day of intervision about the personal
commitment and development plan made during the training. In group, providing an extra opportunity to give and receive feedback so we can create positive change together.

Some statistics so far:

- Hack Your Bias training: almost 100 participants in 2021
- E-learning Introduction to Bias: 145 completions
- E-learning Affinity Bias: 114 completions
- E-learning Confirmation Bias: 95 completions
- E-learning Groupthink: 87 completions

During imec’s biggest internal event of the year end of December 2021 open.minds, imec employees voted this to be the best Diversity & Inclusion action by imec:

2. Looking forward

2.1. 20% of participation by 2025

There is more to come, indeed.

First off, end of 2021 the “Hack your bias!” family has been completed with more difficult biases: gender, ethnicity, and hierarchy. Second, we aim for many more employees to complete the e-learnings and/or training. Today, almost 5% of payroll employees with access to our corporate tool to enroll for e-learnings or trainings, did. We want to quadruple this number by 2025: “1 person in every team of 5” or 20% should have participated in this training. Another way to think of and achieve this goal is organizing the training for interested teams as a whole. The recruiters or internal communication for instance already committed to following imec’s Hack your bias! training.
We expect mothers to work like they don’t have children, and raise children like they don’t work.

#genderbias

2.2. Systematically translate bias hacks into how imec works

Gender bias in the training is defined to be a prejudice towards one gender over the other. Behaviors and characteristics are attributed to people of a certain gender, based on stereotypes. It leads to inequality and lack of fairness in the way individuals are treated. When experiencing gender bias, employees feel disempowered and unfairly treated, negatively impacting motivation and commitment. Teams are impacted negatively because of double standards; similar behaviors being judged differently in men and women. It also influences team dynamics and career mobility.

Which makes it so important to “hack” these biases, especially because they also become deeply rooted in organizational processes. From recruitment to feedback practices, to mechanisms and policies for promotion. Which is why all of these are part of the Gender Equality Plan as well. However, in 2022 we perform an extra analysis to see whether other practices or policies need changing. Think of how meetings are organized and conducted, and how dynamics are led – or not.

Inclusive gender communication

1. Looking back

With everything imec does in Diversity & Inclusion, the aim is to make it explicit and visible. In 2021, the Diversity & Inclusion Calendar was launched. It includes many important days of different cultures, but also International Women’s Day, International Day of Zero Tolerance for Female Genital Mutilation, International Day for Women and Girls in Science, or Unesco’s “Orange the world Campaign”, no to violence against women. This calendar isn’t just communicated; specific actions are attached to it.
2. Looking forward: Improve symbolic & communicative representation of women

Moving forward in 2022, inclusive communication will evolve around 2 main topics: Accessibility, and Representation. While accessibility in material, taking the diversity of people into account, is very important, it is not when it comes to gender. Representation is. imec wants to communicate to all people, not just most people.

We will look for feedback with employees at imec. Do you feel included in the communication that is addressing you? Why (not)? This information should feed into an extensive update of the current communication guidelines (into “inclusive” ones).

- Do they address “default” (stereotypical male, white) target audiences?
- Do they represent women in announcements, explanations, examples and so on?
- Which pronouns are used, and how are they used?
- ....

Inclusive communication should become part of our company culture. A low threshold e-learning and internal campaign will be developed to raise awareness of all of those communicating internally or externally for imec, to the importance of the new guidelines and to make sure they are being used.
Measures against gender-based violence, including sexual harassment

1. Looking back: imec’s inclusive workplace policy

The imec Inclusive Workplace policy launched beginning of 2021 complements the Code of Conduct and aims to be explicit, on our ambition to grow as an organization towards more inclusiveness.

It starts with our vision on an inclusive organization – included in this GEP on page 3 as well. This is framed to be a joint responsibility from everyone within imec. To support this commitment, everyone at imec is encouraged to read the policy, behave according to the guidelines, and seek immediate action when any kind of unwanted behavior whatsoever occurs. The policy should empower us to ACT!

The policy:
- Describes the desired behavior of all employees for imec to grow towards more inclusiveness: welcome diversity, strive towards inclusiveness and actively embrace equality.
- Defines unwanted behavior: microaggressions, harassment and violence (gender-based/sexual as well)
- Includes guidelines, consequences, and measures in case of unwanted behavior:
  - What to do when subjected to this kind of behavior
  - What to do when you witness such behavior
  - What is expected from managers: set the example, create a safe environment to discuss in team, deal expeditiously and fairly when in knowledge of unwanted behavior, take action and follow-up
  - What follow-up is provided in terms of consequences and measures
- Describes how imec will evaluate the effectiveness of this policy and adjust if needed,
- Offers an overview of local initiatives, help-channels, and other ways to find the help you need in local entities.

2. Looking forward: “Take care” campaign

The more people feel protected and taken care of, the more they can invest in innovative ideas. The outcome of the connected minds survey of March 2020 showed that there are still gaps in the organization that result in people left alone when dealing with undesired behavior:
- 8% of people experienced undesirable behavior
- Only 50% reported this behavior to a manager or confidential advisor
- Only 40% of those reporting the behavior, say that they received adequate support from imec following the report.

In 2022, we will have a first opportunity to evaluate the effectiveness of the policy, as the bi-yearly connected minds survey is organized in March 2022 and will ask about unwanted behavior, reporting of this behavior and support received once more. A complementary action is the retrospect of all reported violations of the inclusive workplace policy in 2021 together with the HR BPs and all others involved in the reporting and support mechanisms. Did the policy perform well, in terms of clarity, guidelines, consequences and measures?

2.3. Improve diversity and activity of persons of trust

Most of our persons of trust have been active for quite some time. In 2022 we look for some replacements and additions to this team and will use this opportunity to expand the diversity of this group to increase the accessibility. We make mutual expectations crystal clear, as today this is lacking but of course define those within the extensive legal framework available:
- What is the role, what are the responsibilities?
- What is the process for certain cases or actions?
- What is the collaboration with other HR roles, nurse and doctor, external support, ...?

2.4. Introduce antenna's

Imec aims to create a network of low threshold antenna’s in the organization to increase accessibility and follow-up. In 2022, we define their role, select the right people for this role, set up initial training and intervention to follow-up, ...
2.5. Make easy-to-find and comprehensive information available

In 2022 we will improve all online information and communication to support the implementation of the policy:

- Set up a new unified framework on one internal site, with all necessary information, processes, and different channels to reach out to:
  - Review all current info on different channels and check if correct/outdated
  - Examine and communicate the legal framework surrounding conflict resolution in a better way
- Create extra awareness via communication campaign: How does imec Take Care? And how can you Take Care?

Integrating the gender dimension into research and teaching content

1. Looking back: brightlab

Brightlab is an initiative of RVO-Society, an organization founded in memory of Roger Van Overstraeten, the founder and first director of imec.

Brightlab shapes future innovators with stimulating, powerful and innovative STEM education. Brightlab offers innovative educational tools and STEM projects for teachers or for leisure time. They make it their mission to ensure that every child, regardless of their gender or background, has access to high-quality STEM education. To achieve this mission, they use innovative research of imec attuned to the living environment of young people and translate it into primary/secondary education.

High-quality STEM education for every child, regardless of their gender or background (sharepoint.com)

2. Looking forward: “Yes We Make It!”

In 2022 at least 5 educational STEM packages are developed or reworked, that have a clear link with at least one of the sustainable development objectives. Specifically, aiming at Gender equality, one package will be developed in 2022:

Yes We Make It!—to motivate girls in primary school for STEM

- Try-out track: a few teachers of 3 schools follow 3 coaching sessions (Q1 2022)
- Mature track: teachers of at least 10 schools follow the coaching sessions and build a community (Q2 2022)
### Attachment – imec BE and imec NL diversity from a gender perspective

Numbers on female representation are payroll only, situation December 2021.
